Professional Summary

System Engineer with hands-on experience building and supporting microservices architecture using Java 8, Spring Boot and RESTful APIs within large-scale banking platforms. Proven ability to deliver secure, high-performance backend systems, optimize database queries, and improve application reliability in distributed environments. Experienced in implementing Redis caching, handling production support, and integrating backend services with frontend applications. Skilled in AWS, Docker, CI/CD pipelines, and Agile delivery with strong foundations in multithreading, system design, and object-oriented principles.

SKILLS

Programming Languages: Java 8, Python

Backend Technologies: Spring Boot, Spring MVC, Spring Data JPA, Hibernate

Frontend: Angular (TypeScript)

Databases: MySQL, PostgreSQL, Redis

Architecture: Microservices, RESTful APIs, API-driven development

Cloud and DevOps: AWS, Docker, GitLab CI/CD, Jenkins

Testing : JUnit, Mockito

Tools: Git, Maven, Postman

Concepts: Object-Oriented Programming, Multithreading, System Design, ACID Properties, Agile/SCRUM, TDD, BDD, DBMS.

EXPERIENCE

Java Backend Developer | System Engineer

TCS (ICICI Bank-Loan Processing Platform)

October 2023 - Present Noida, India

- Developed and maintained production-grade backend microservices using Java 8 and Spring Boot, ensuring high availability and scalability for banking workflows.
- Designed and implemented versioned RESTful APIs with validation and global exception handling support.
- Optimized MySQL queries and indexing, improving data retrieval performance by 25% for high-volume banking transactions.
- Implemented Redis caching, reducing API latency by 40% and lowering primary database load during peak traffic.
- Developed Angular components and services, integrating REST APIs and managing application state using RxJS for responsive user interfaces.
- Wrote unit and integration tests using JUnit and Mockito to improve code quality and maintainability.
- Took ownership of assigned services from development through deployment and production support, ensuring high availability and reliability.
- Worked on Loan Processing Platform (LPP), a banking loan application that automates the end-to-end loan lifecycle from application to disbursement. Integrated multiple third-party vendors to enable secure data validation, accurate loan decisioning, and streamlined CRM operations across different user roles.
- Led API integration discussions for eKYC, DKYC, eSign & eStamp, Aadhaar, PAN, Video KYC, ensuring 100% compliance with regulatory requirements.
- Contributed to CI/CD pipelines using GitLab and Jenkins, automating build, test, and deployment workflows.
- Enhanced operational efficiency by optimizing CRUD operations, developing 20+ RESTful APIs, and streamlining workflow across major developments.
- **Technologies:** Java 8, Spring Boot, Hibernate, REST APIs, Angular, MySQL, JUnit, Mockito, Redis, Git.

EDUCATION

Bachelor of Technology, ABES Engineering College, GHAZIABAD

Aug 2019 - July 2023

CGPA: 7.47/10

Major: Computer Science Engineering

ADDITIONAL EXPERIENCE

- Solved 150+ coding problems across multiple platforms.
